

JAMDAGNI PUBLIC SCHOOL

The students of Class 3 of our school, successfully participated in a two-day experiential learning . A Science activity on **"DIFFERENT TYPES OF BIRDS' NESTS"** was conducted from July 21 to July 22, 2026 aimed at teaching young learners about avian habitats through hands-on exploration. The children used natural and craft materials like twigs, dry grass, straw, and cardboard to craft beautiful miniature nest replicas and colorful birdhouses. The event concluded with an outdoor exhibition where the students proudly displayed their models and explained the unique nesting habits of different birds, beautifully combining environmental education with creative expression to foster a deep love for nature.
